

Lotus Protector for Mail Security Webinar

Wednesday, May 27th, 11:00 am - 12:00 pm CDT

Come hear Art Fontaine, IBM Product Manager for Lotus Protector, and Matt Wingard, Senior Consultant from Mercury Consulting, overview Protector and how organizations can implement better spam filtering and e-mail security.

Lotus Protector for Mail Security is optimized for the Lotus Domino messaging environment and leverages security technologies from IBM's Internet Security Systems (ISS) to provide both spam filtering, pre-emptive virus protection, and more.

Lotus Protector is available as a dedicated hardware appliance or a VMware environment that front ends the Domino server from incoming messages - reducing workload on your mail server and network.

Mercury's Lotus Protector Services offer organizations assistance in planning, installation, and implementation of filtering and security policies.
